

HANNAH JOY LEHMAN

I am a versatile Software Engineer with the sensibilities of a Product Manager, backed by start-up experience in EdTech, AdTech, and food services. I leverage my expertise in business development, strategic solution implementation, and thorough communication between technical and non-technical teams. My experience spans responsive front-end development, back-end web development, team management, operations, quality assurance, and technical instruction.

Ruby, Rails, JavaScript, React, jQuery, SQL, Redis, PostgreSQL, Email Development, Quality Assurance, Operations, Administration, Team Management, Training and Development, Cost Analysis, Wire-framing, User Testing, Agile Team Processes, JIRA, Confluence, Trello, Version Control (via GitHub), Code Review

Experience

Software Engineer, Email Marketing Consultant - General Assembly New York City - Sept 2015 to Sept 2016

As an engineer on the Website & Acquisitions team, I personally touched anything that was user-facing, from the website, to email, to marketing lander pages. The work included development of responsive email templates, integration with our email service provider's API, Ruby on Rails development, and some React.js. I also consulted the marketing team by assessing and fixing broken processes, cleaning up old email templates, training the marketing team on new tools to develop email, and developing tools to make their processes more sustainable.

Freelance Web Developer - Handstand Media Charlotte, NC - Dec 2014 to Sept 2015

Created websites for small businesses, primarily using HTML, CSS, Javascript, Twitter-Bootstrap, Ruby on Middleman and the Adobe Creative Suite.

Code Immersion Instructor - Tech Talent South New Orleans, LA; Charlotte, NC - Jan 2015 to Aug 2015

I teach the full stack of web development to adult students in the format of an 8-week bootcamp. This includes developing lesson plans, and teaching topics while live-coding in the classroom setting. I also launched the TTS Campus in New Orleans, which made it the city's first code bootcamp. Topics include but aren't limited to HTML, CSS, Ruby on Rails, TDD, SQL, the DOM, MVC frameworks, CLI, User Experience, Prototyping, Sinatra, Middleman, and Version Control.

Software Engineering Intern - Klick Push Charlotte, NC - April 2015 to May 2015

Wrote Ruby code and tests on middleware to integrate with various REST and SOAP API of email service providers. Used existing documentation to establish the best approach and to develop a system of implementation for future developers.

Code Immersion Student - Tech Talent South Charlotte, NC - Oct 2014 to Dec 2014

General Manager, Luna's Living Kitchen - Charlotte, NC - Aug '12 to May '14
